Professional Summary

A highly skilled Java Developer with over 6 years of experience in developing enterprise-level web applications across various domains such as Research, E-commerce, Telecom and others. Proficient in the full software development life-cycle with a strong focus on designing scalable, modular solutions. Demonstrated ability to lead teams, mentor junior developers, and consistently deliver high-quality software solutions.

Skills

- | | |
|---------------------------------|-----------------------|
| • Java / J2EE | • Amazon Web Services |
| • Spring Boot/MVC/JPA/Hibernate | • Rabbit MQ |
| • Docker | • Redis |
| • MySQL | • Git |
| • Oracle | • Jenkins |
| • Angular | • Elastic Search |

Work History

Lead Software Engineer

Polus Solutions, Kerala, India

Jun 2023 - Present

- Leading the migration of on-premise applications to the cloud, improving scalability and reducing operational costs.
- Spearheading the development of enterprise-level applications, ensuring the delivery of robust, scalable, and API-centric solutions.
- Collaborating with cross-functional teams to address technical challenges, leading to the successful resolution of complex issues.
- Mentoring and providing technical leadership to junior developers, enhancing team performance and skillsets.
- Driving the implementation of best practices in code reviews, resulting in improved code quality and maintainability.

Projects: Working in product of company(Fibi Application) around its 20 modules.

Technology Analyst

Timwetech, Dubai, UAE

Aug 2022 - June 2023

- Development and deployment of any change request coming from the Client & Ops team.
- Prioritized and managed multiple open issues, ensuring proper logging in ticketing systems for effective resolution and streamlined communication.

- Led end-to-end development cycles, inspiring and motivating the team, from design and implementation to testing, deployment, and ongoing maintenance.
 - Proactively addressed client needs by troubleshooting IT systems, analyzing requirements, and ensuring timely response and deployment of change requests.
- Projects:** Middle System, Google Integration for ooredoo, Integration timwe feature with different mobile operator over middle east and east Africa.

Software Developer

Karma Technologies, Dubai, UAE

Feb 2022 - Aug 2022

- Modernized legacy code bases to align with current development standards, leading to improved functionality and maintainability.
- Collaborated with project managers to define clear project specifications and milestones, ensuring timely delivery.
- Led the integration of shopify and woocommerce sites with the firm's ERP system, enhancing the e-Commerce capabilities.

Projects:

E-commerce Application: Updated and integrated the E-commerce Application, improving user experience and overall functionality.

Senior Software Engineer

Polus Software, Kerala, India

Jun 2018 - Feb 2022

- Played a key role in the design and development of high-performance solutions that met or exceeded client expectations.
- Developed and maintained scalable infrastructures, ensuring seamless integration and performance across different modules.
- Conducted training sessions for junior developers, focusing on Java, MySQL, and Oracle, which improved overall team productivity.
- Led critical projects such as FIBI and ORCID Integration, which significantly enhanced the client's operational efficiency.

Education

Java Certification Course: Java, J2EE, Hibernate, Spring Boot

Quest Innovative Solution

Mar 2018

Kerala

Bachelor of Technology: CSE

Gurudeva Institute of Science & Technology Under MGU

May 2017

Kerala

High School Diploma

St John The Baptist HSS

Jun 2013

Kerala

Job Knowledge

- Demonstrated expertise in developing web-based applications using Java, Spring Boot, and Micro-services.
- Exposure to frameworks such as Spring MVC, Hibernate, and event-driven architecture.
- Strong technical development experience with MySQL, Oracle, Log4J, Maven, Spring Actuators, Quartz Schedulers, API-gateways and various servers.
- Basic knowledge of Angular, Docker, Jenkins, Kubernetes, GIT, JIRA, Service-now, Redmine, Continuous Deployment, Elastic Search, and Single Sign-on mechanisms.
- Familiarity with the Agile (SCRUM) development process.
